## IMPORTANT INFORMATION

The Single Jackbolt Tool is designed for MJT sizes starting at M64 (or 2-1/2"), as it is suited for jackbolts that are sized M16 (or 5/8") or larger in diameter. It becomes especially advantageous for MJT sizes over M100 (or 4"), which contain jackbolts that are sized M20 (or 3/4").

Reaction arm and jackbolt socket consideration are essential for proper Single Jackbolt Tool operation. A custom solution may be required.
